

Definitions of Done

Sprint DoD:

- Code checked into repository (GitHub)
- Code reviewed by team members
- Documentation completed
- Unit tests definitions written covering user stories/equivalence classes
- Unit tests pass without error
- Code merged with master branch.

User Story DoD:

- Completed all tasks per user story
- All tasks have been successfully unit tested/meets defined acceptance criteria
- Code properly commented and documented
- Team review of user story and work done for it

Sprints:

1. To begin a sprint, members of a team need to discuss and establish their ability to commit to the project, in terms of other commitments they have throughout the quarter, such as classes, work, or other projects, and their availability throughout the quarter, such as periods of time where a team member will be absent and unable to commit fully to the project.. This way a team can establish what is the expect number of work hours available during an average sprint and plan accordingly.
2. Team members select user stories from the product backlog to establish the goals of this sprint and what the team expects to get done.
