Sprint 3 Report
NeatTabs
11/23/2016

Actions to stop doing:

1. One thing we should stop doing is failing to complete all of our Team Status Reports and update sprint burnup chart.
2. Another thing we should stop doing is failing to do proper documentation alongside our code and leaving it for the end of the Sprint.
3. Also, another thing we should stop doing is being late to the start of Sprint meetings and not telling members when been late.
4. Another thing we should stop doing is not holding team members accountable for their work contributions to the project by deadlines.

Actions to start doing:

1. One thing we should start doing is finalizing our documentation and preparing our codebase for release.
2. Another thing we should start doing is code reviews either individually or as a group to familiarize ourselves with the work done by others.
3. Also, another thing we should start doing is emphasizing testing over development and case/code coverage.
4. Additionally, another thing we should start doing is start applying the definition of done more often to ensure that our team/product stays on track.
5. And, we need to start holding team members accountable for their work and contribution to the project, by making deadlines for work, reviewing team members code, and asking what issues they have.

Actions to keep doing:

1. One thing our team should keep doing is having additional meetings outside of Scrum meetings to collaborate, discuss, and work on the project together.
2. Another thing to keep doing is discussing the various ways of implementing a function or requirement and hashing out how feasible each option is. This allows for every member to be involved in the thought process and for the pros and cons to be weighed out as a collective.
3. Also, another thing we should keep doing is constant GitHub commits/merges/pushes and transparency in what has been done each commit.

Work completed/not completed:

This is a list of the user stories that were completed during the previous sprint, and a list of the user stories not completed during this sprint (but which were part of this sprint, and were in the sprint plan).

Stories Uncompleted:
1. (8) As a user, I want to be able to group together certain domains/tabs that have similar uses to me ({Netflix,YouTube} versus {ecommons, my.ucsc.edu}) - Tree View

Stories Completed:
1. (8) As a user, I want to be able to easily find and install this app.
2. (8) As a user, I want to see and visualize the different websites I spend my time on with a user-specified (daily, weekly, etc.) basis

Work completion rate:

This section should report the following: total number of user stories completed during the prior sprint. Total number of estimated ideal work hours completed during the prior sprint. Total number of days during the prior sprint. For the previous sprint, the user stories/day and ideal work hours/day figures should be reported. For sprints past the first sprint, this section should also provide the average user stories/day and average ideal work hours/day figures computed across all sprints to date. The final sprint burnup chart for the previous sprint should be available for viewing in the lab and an email of this chart sent to the TA/prof.

Total number of user stories complete for Sprint 3: 2 user stories completed/1 user story incomplete
Total number of estimated ideal work hours completed for Sprint 1: 31 hours
Total Sprint 1 estimated work hours: 14 hours
Number of days for Sprint 3: 17 days
